Subject: Site Service Measurement Response

As per page 4 of the 2015-2016 QAP; "Odometer Calculations: the distances to positive services are driven and the odometer mileages and electronic tracking data systems used to determine mileage calculations. Distances are measured to one decimal point and are not rounded up or down. Distances less than a ½ mile are measured using electronic tracking data systems."

The distances are only measured to one decimal point and there will not be rounding (either up or down), meaning anything beyond one decimal point will not be considered in determining the measurement. Once the distance reaches 0.5 miles, the distance would be measured as being under 1 mile but not within 1/2 mile. Once the odometer rolls to 1 mile, the distance would be measured as being under 1.5 miles but not within 1 mile, etc.

As a note, all of the figures you provided below are under 0.5 miles.

On the service mileage, not rounding up and to one decimal point means...

.05

.051

.059 ??

Sincerely,

Jennifer H. Wilkinson
